

## Solución

$$\text{solve for } x, 0 = rx \left( 1 - \frac{x}{K} \right) \left( \frac{x}{A} - 1 \right) : x = 0, x = K, x = A; \quad K \neq 0, A \neq 0, r \neq 0$$

### Pasos

$$0 = rx \left( 1 - \frac{x}{K} \right) \left( \frac{x}{A} - 1 \right)$$

Intercambiar lados

$$rx \left( 1 - \frac{x}{K} \right) \left( \frac{x}{A} - 1 \right) = 0$$

Utilizando el teorema de factor cero: si  $ab = 0$  entonces  $a = 0$  o  $b = 0$

$$x = 0 \quad \text{or} \quad 1 - \frac{x}{K} = 0 \quad \text{or} \quad \frac{x}{A} - 1 = 0$$

$$\text{Resolver } 1 - \frac{x}{K} = 0: \quad x = K; \quad K \neq 0$$

*Mostrar pasos*

$$\text{Resolver } \frac{x}{A} - 1 = 0: \quad x = A; \quad A \neq 0$$

*Mostrar pasos*

Las soluciones son

$$x = 0, x = K, x = A; \quad K \neq 0, A \neq 0, r \neq 0$$
